

## Change Notice

### Wiring color code and gauge DL2 Sensor cable

#### Background

There have been some confusion concerning the wire utilization due to colors used on our DL2 orange sensor cable p/n ZZK-01107. We therefore decided to change the colors as to make them easier to identify. Please note that the wire gauge used for sensor power has been increased in this new version of cable. The new cable part number is ZZK-01124 valid from February 2022.

#### Impact

This notice is meant to clarify the changes and how to connect the sensor cable in the Junction Box JB12 and the J3 connector if connected directly to the JB70D2Sx Electronic.
