

SKIPPER

To whom it may concern

Oslo, 2nd. December 2021

SKIPPER Speed log DL850 are obsolete product.

SKIPPER Speed log DL850 is obsolete and replaced by DL2.

DL2 Speed log will, in most cases, replace the old DL850. The complete unit with Display, Electronic unit and sensor will have to be replaced.

Different form

The DL2 display and electronic unit have different form.

Fit

The DL2 sensor has the same physical fit as DL850 270kHz. It will fit into the same Sea valve and tank as the DL850 270kHz.

The DL2 display and electronic unit are smaller than DL850. A retrofit plate may be purchased to fit the new units into an existing DL850 Display hole.

Some different functions

The DL2 is a more modern equipment. Most of the normal in/out interfaces are the same but there are some additional and some removed functions. Please see brochures and specification.
