New Setup and option overview with prices:

SKIPPER has now released a new setup and option overview with prices. [Read more here!](#)

New updated Brochures:

Feel free to download all SKIPPER Brochures on www.skipper.no. All SKIPPER Brochures are now updated and released on our web page. The latest version of the catalogue is obviously also available to download.

Technical news

Courses 2010

Course timetable: We have now finalized the 2010 courses. We will be trying something new this year. As well as Advanced service courses in Europe, we will be holding a **“train a trainer”** course in OSLO to train trainers to give similar courses for SKIPPER products in their own areas. This will allow training to occur in other languages, and angled toward the particular needs of the area.

Course type	When	Where	Host Company
Advanced service course	20-21. April	Edinburgh - UK	Echomaster Marine
Advanced service course	26-27. April	Antwerp - Belgium	Radio Holland - Belgium
Advanced service course	Late Summer	Oslo, Norway	SKIPPER Electronics
Train a trainer	Late Summer	Oslo, Norway	SKIPPER Electronics

Please register your interest for these courses by sending a mail to support@skipper.no. We will send you more details then. [Click here for more details of the courses](#)

SKIPPER to visit Brazil?

We hear on the grapevine that Brazil and South America is fast becoming important in the shipping and ship building industry. We are looking at visiting Brazil during 2010, if you would like to meet up with our sales and technical team, please make contact with us.

New manuals for most products

In the past months we have been working hard on updating our manual series to ensure they are fully updated and correct. We have also included some new explanations for calibration and setup. The manuals will be loaded up to our web site next week together with an indexed list on the forum.

New development

SKIPPER is always looking at improving its products. If you find something that could be changed, please add a comment on the forum. www.skipper.no/smf

Find more information on www.skipper.no

Best regards

Sigurd H. Paulsen

Train a trainer course

Course leader: Paul Connelly

This course will go through the Advanced service course, mounting, the documentation available, and into greater depth of the products and their use. The trainees will get to work closely with the development and service teams to see what is important information to pass on. The course will also include a trip on a vessel to go through the normal mounting tasks as well as diagnostics. As much of this course is in small groups, the number of places will be very limited.
