

Welcome to the February edition of SKIPPER Newsletter.

It is good to see that the year 2011 starts with a positive trend in our maritime market. Hopefully this trend will continue throughout this year and into the future. There has been and is still a lack of some electronic components worldwide and we are doing our best in order to overcome this problem, and avoid delays in our production.

Sales

The new DL850S27 Doppler Speed Log Sensor:

The design has been changed to improve the life time.

The old part number DL850S27XX-XA is now being replaced by DL850S27XX-XB, where X will vary depending on the mounting or OEM version.

DL850S27XX-XB is already released and replaces all DL850S27XX-XA orders.

There are no changes in price.

Ice plate for Echo Sounder 200 kHz Transducer:

The existing ice protected tank (ETNSTCI) for the 50 kHz Echo Sounder Transducer has now been tested for the 200 kHz Transducer (ETN200FS/ETN200FSX). This configuration works well within the IMO minimum specification of 200 m depth, and is already available for delivery.
