## Sales

The new reversed version of the IR300 has the following part number and is ready to be ordered:

- ENIR300PDR-SA Digital Speed & Distance Reversed Repeater

The reason for developing this repeater is to be able to use the repeater on both sides of the bridge of ferries, tugs, and other vessels operated in both directions (fore and aft).

All our Digital repeaters are operated by NMEA 0183 signals, and are IP-56 protected, in order to be placed outside on bridge wings. The IR300 repeaters could also be connected to our remote dimmer (IR30DIM).

It is now possible to download the latest Catalogue and Setup and Options from [www.skipper.no](http://www.skipper.no).

## New Quality Manager:

Sverre Thorstad is now our new Quality Manager. He started 1. January 2010, and he has experience with quality standards from several companies, one of them being Simrad Optronics. He has already being involved in several projects, and we are looking forward for his experience.
