Deres ref : IEC62288:2014-Echo Vår ref : prc Dato August 19.02.2018

Product change note: Navigation Echosounders

Products involved:

- ➤ EN101C-SA GDS101 Single channel Echosounder
- > EN102C-SA GDS102 Dual channel Echosounder

Issue description

From August 2016 A new version of regulation for display IEC62288:2014 Became obligatory on new vessels. This standard changed a number of systems, and this included all systems with alarms. A newer alarm methodology more suited for integration and remote alarm handling became obligatory in standard IEC62288:2014 through IMO res MSC302(87)

To keep Wheelmark approval of the echosounders the following changes were made

- 1. ALF/ACN handling was added for Category A alarms.
- 2. The Deep water Alert was removed, as this gives over complicated alarm handling.
- 3. Some changes were made in graphics and colouring to fit the new standards
- 4. NMEA input filtering and coms screen colouring of incoming messages are changed to meet the standard

Action taken:

- New Multi/Mini products (ESN100 / ESN200), have full handling of all parts of the ALF/ACN standard
- GDS products listed in 'Products Involved' follow the standard, and have a single Category A Shallow water alarm implemented with software >= SW-G006-1.13.0 for GDS102 and SW-G010-5.6.01
- For older vessels the user can select a category A or category B alarm handling on screen 13.

Best regards
